

ECONOMY — National Income

Batch 2/10 · Parmar Ch.3 (full) + Lucent §1+§5 (full) + PYQ bucket "02 National Income" · ★=PYQ-tested · [B]=PYQ-book-only fact

1 National Income — Definitions & Pioneers

- National Income → total value of goods+services by a country's residents in a year → macroeconomic concept
- Concept first given by → **Dadabhai Naoroji**
- National Income Committee (1949) → headed by **P.C. Mahalanobis**
- **V.K.R.V. Rao** → scientific approach to calc. National Income; also gave two-sector economy classification
- National wealth ↔ National income → wealth = present assets at a point in time; income = production power over a period
- Calculated on 1-year base → captures all seasons

DOUBT Data-issuing body conflict: Lucent §5 says "issued by Central Statistical Organisation (CSO)"; Lucent §1 (same book) attributes releases to NSO/MoSPI. CSO has since merged into NSO — both statements transcribed as printed, not reconciled.

$\text{NNP at Factor Cost} = \text{NNP at Market Price} - \text{Indirect Taxes} + \text{Subsidies} = \text{GNP at MP} - \text{Indirect Taxes} + \text{Subsidies} = \text{National Income}.$

2 Circular Flow of Income

- Def → continuous movement of goods/services/resources/money in an economy
- Households → provide land/labour/capital to Firms → get income (wages/rent/profit)
- Firms → produce goods/services → sell to Households (expenditure)
- **Real Flow** → movement of goods/services/factors of production | **Money Flow** → movement of money/payments

Factor of Production	Payment
Land	Rent
Labour	Wages
Capital	Interest
Entrepreneur	Profit

- **2-Sector Model** → Households+Firms (simplest)
- **3-Sector Model** → +Government
- **4-Sector Model** (Open Economy) → +Foreign trade
- **Injection** ★ → funds entering economy, ↑ spending/income → eg Investment, Govt Spending, Exports
- **Leakage** ★ → funds exiting circular flow, ↓ spending/growth → eg Savings, Taxes, Imports

HOOK 2-sector economy [B] ★: households save part of income → savings = **leakage** ★ from circular flow → ↓ total demand → must be balanced via investment (NOT "automatic firm-profit increase," inflation, or constant output — tested distractors).

3 Three Methods to Calculate National Income

Method	Mechanism
Value Added / Production / Output Method	Value at each production stage; Value Added = Output – Input
Income Method	Sum of all factor-of-production income in producing final goods/services
Expenditure Method	Sum of all spending on goods/services — most common GDP method; = C+G+I+(X–M)

Worked example (Value Added): Cotton ₹100 → Yarn ₹200 → Cloth ₹400 → Shirt ₹800 (output at each stage); value added at each stage = 100 / 100 / 200 / 400.

GVA → value producers add to goods/services bought+sold; $GVA = GVA_1 + GVA_2 + \dots + GVA_N$. Adopted by CSO in 2015 (as printed; CSO since merged into NSO).

Income Method components: (a) **Compensation to Employees** → total wages/salaries; (b)

Operating Surplus → profit+rent+interest after deducting employee compensation; (c) **Mixed Income** → self-employed/unincorporated business income, where labour+capital factor-income can't be separated → eg a doctor running their own clinic.

Orange Economy → creativity/culture/IP-based economy → eg film industry, music industry, fashion design.

4 Goods Classification & Economic Problems

Final Goods	Intermediate Goods
No further economic process; used for personal consumption/investment (direct)	Semi-finished, undergo further transformation; inputs for other goods, get customised
Eg: tea bought from shop for personal use	Eg: tea bought by a hotel to prepare+resell to customers [B: also — copper used to make utensils]

3 fundamental economic problems (scarcity-driven): **What to Produce?** (resource allocation across goods) · How to Produce? · For Whom to Produce?

Consumer Goods	Capital Goods
Finished, direct personal use, not used to produce other goods; eg clothes/food/smartphones	Used by businesses to produce other goods, not immediately consumed; eg machines/factory equipment/tools [B: durable, don't transform into final product]

- **Inventory** → stock held for sale/production (raw material/WIP/finished goods); sales ↑ → inventory decumulates, sales ↓ → accumulates; planned or unplanned
- **Auxiliaries to Trade** → services moving goods producer → consumer → eg transport, communication, banking, insurance, warehousing, advertising

Stock	Flow
Static; measured at a point in time; eg wealth, loan, inventory, capital, money supply	Dynamic; measured over a period; eg income, expenditure, inventory change, depreciation

5 GDP, GNP, NDP, NNP — Definitions & Core Formulas

- **GDP ★** → total value of final goods/services within a country's territory, in a financial year (1 Apr–31 Mar); second-hand goods never counted; only final goods counted (avoids double counting) [B: excludes intermediate goods' value — the "usually excluded" answer ★]
- GDP developed by → **Simon Kuznets** (Russian-American economist), 1934
- GDP full form ★ [B] = Gross Domestic Product

TRAP GDP's 5 limitations as a welfare measure: (1) ignores income distribution; (2) excludes non-market activities (household work/volunteering/caregiving); (3) ignores environmental damage; (4) excludes quality-of-life factors (health/education/leisure/safety/happiness); (5) excludes underground/black-market economy. [B ★ A-R: "GDP doesn't tell the whole wellbeing story" = TRUE; "doesn't count wear/tear, pollution, income distribution" = TRUE, correctly explains it ★.]

- **GNP ★** → total value of final goods/services by nationals of a country (residents, within+abroad) [B: "total global income of Indians" ★]; $GNP = GDP - \text{Factor Income to Abroad} + \text{FI from Abroad}$, OR $GNP = GDP + \text{NFIA}$ (Net Factor Income from Abroad)
- **NDP** → economic output after adjusting for depreciation; **NDP = GDP – Depreciation**
- Depreciation → asset's monetary value ↓ over time (wear & tear), seen in capital goods [B: replacement investment = depreciation; Gross Investment – Depreciation = Net Investment ★; worked example: machinery ₹50 lakh, depreciation ₹5 lakh → Net Investment = ₹45 lakh ★]
- **NNP ★** → monetary value of finished goods/services by a country's citizens in a period; **NNP = GNP – Depreciation** [B: GNP-NNP difference = Depreciation ★ — the tested distinguishing fact]

Market Price (MP)	Factor Cost (FC)
Final selling value, includes indirect taxes	Cost of factors of production; indirect tax NOT included [B ★: FC = ONLY payment to factors — land(rent)/labour(wages)/capital(interest)/entrepreneurship(profit); excludes product/production taxes, no subsidy subtracted ★]

$FC = MP - \text{Indirect Tax} + \text{Subsidy} = MP - \text{Net Indirect Tax}$. Basic Price = FC + Net Production Tax (Net Production Tax = Production Tax – Subsidy).

Product tax (per-unit, eg GST/excise/sales tax) ↔ **Production tax** (independent of output, eg land tax/stamp duty/licence fee).

Mnemonic: Gross→Net = subtract Depreciation | Domestic→National = add NFIA | MP→FC = subtract Net Indirect Tax.

Nation's Territory=GDP | Nation's People=GNP | Total Income=Total Expenditure=Total value of goods/services.

6 National Income — Full Formula Reference (advanced, Lucent)

Formula	Definition
GVA at basic prices (Production Approach)	= Output at basic price – Intermediate Consumption
GVA at basic prices (Income Approach)	= CE + Operating Surplus/Mixed Income + CFC + Production taxes less Production subsidies
GDP	= Σ GVA at basic prices + Product taxes less Product subsidies
NDP / NNI	= GDP/GNI – CFC (Consumption of Fixed Capital)
GNI	= GDP + Net Primary Income from Rest of World (Receipts – Payments)
Primary Incomes	= Compensation of Employees + Property & Entrepreneurial Income
NNDI	= NNI + other current transfers from RoW, net
GNDI	= NNDI + CFC = GNI + other current transfers from RoW, net
Gross Capital Formation (financing side)	= Gross Savings + Net Capital Inflow from RoW
GCF (expenditure side)	= GFCF + Changes in Stock (CIS) + Valuables
Gross Disposable Income of Govt.	= GFCE + Gross Saving of Central Govt.
Gross Disposable Income of Households	= GNDI – GDI of Govt. – Gross Savings of All Corporations

Production taxes/subsidies: independent of output volume; eg Land Revenue, Stamps & Registration fees, Tax on Profession (taxes); Railways subsidy, village/small-industries subsidy (subsidies). **Product taxes/subsidies:** per-unit; eg GST, Excise, Sales Tax, Service Tax, Import/Export duties (taxes); Food/Petroleum/Fertilizer subsidy (subsidies). "Other Current Transfers" = transfers other than primary incomes. GCF estimated 2 ways: flow-of-funds (Gross Saving + net capital flow from RoW) OR commodity-flow (by asset type).

7 Real vs Nominal GDP, Deflator & Income Measures

Real GDP	Nominal GDP
Base-year reference; constant prices; inflation-adjusted	Current prices; inflation NOT adjusted → higher than Real GDP due to inflation

GDP Deflator = $(\text{Nominal GDP} / \text{Real GDP}) \times 100$ → aka "Implicit Price Deflator" / "Price Index." Does NOT factor in import prices; accounts for value of all final goods incl. exports. India's GDP calculated by NSO under MoSPI.

HOOK Sectoral GDP-share shift [B] ★: **1950-51** → Industry ≈12-13% of GDP, Agriculture ≈53-59%, Services ≈27-30% (economy mainly agriculture-based then). **Today** → Services = highest GDP contributor, >**54%** of GDP ★ — even though Agriculture still employs the most people ★ (economic value-add ≠ employment share); within services, **Trade/Hotels/Transport/Communication/Financial Services** are the most significant contributors ★.

DOUBT Base-year conflict: Parmar states GDP base year = 2022-23 (as of 2026); Lucent's own data tables use the 2011-12 base series throughout (SAE/FRE/FE tables below). Both transcribed as printed, not reconciled — verify current official base year before relying on either.

- **Per Capita Income** → avg money earned per person in an area/period; = National Income / Population
- **Purchasing Power Parity** → goods/services buyable with given money ("common basket of goods")
- **Personal Income** → total individual income from all sources, before taxes; $PI = NI + \text{Income received but not earned} - \text{Income earned but not received}$, OR $PI = NI + \text{Govt transfers} + \text{Net interest paid by Govt} + \text{Corporate tax payment for social security}$ (garbled as printed); $PI = NI + \text{Transfer Payment} - \text{Undistributed Corporate Profit}$ (Transfer Payment eg = Govt subsidies/Scholarship/Pension)
- **Personal Disposable Income** ★ → money left after taxes+mandatory withholding; = **Personal Income** – **Tax** [B: belongs to households ★ — the tested "who does PDI belong to" answer]
- **Potential GDP** → total output if resources fully utilised; **Recessionary Gap** = **Potential GDP** – **Real GDP**
- **Green GDP** = **GDP** – **Environmental Damage**
- **Gross Domestic Capital Formation** → total investment to create/increase physical assets; eg factory building, new machinery

DOUBT India's global GDP rank conflict: Parmar (as of 2026) says India ranks **5th nominal, 3rd in PPP** (after USA, China); Parmar's own "Ranking of GDP (Nominal)" box: 1.USA 2.China 3.Germany 4.Japan 5.India. Lucent's Forbes India (28 Apr 2025) table (see Batch 6) shows India **4th nominal**. Both preserved verbatim — rankings are time-sensitive and disputed even within the source material.

8 India's National Income — Growth Data (FY2022-25, time-sensitive)

DOUBT Every figure in this section and the next is dated to NSO/MoSPI releases of 28 Feb 2025 and 30 May 2025 — superseded by later FY25 revisions (due 2026/2027) and FY26 estimates. Do not treat as current (today: Sept 2026); verify against the latest MoSPI release.

- NSO/MoSPI Press Note (28 Feb 2025): Second Advance Estimates (SAE) of National Income 2024-25; Quarterly Estimates of GDP for Q3 2024-25; First Revised/Final Estimates for 2023-24/2022-23
- SAE released at Constant (2011-12) + Current Prices, per National Accounts release calendar
- Real GDP growth FY24-25 = 6.5%; Nominal GDP growth = 9.9% (both revised up from First Advance Estimates)
- Real GDP FY23-24 (First Revised Est.) = 9.2% → highest in 12 yrs except FY21-22 (post-COVID); driven by Manufacturing +12.3%, Construction +10.4%, Financial/RealEstate/ProfServices +10.3%
- Real GDP FY22-23 (Final Est.) = 7.6% → driven by Trade/Hotels/Transport/Comm/Broadcasting +12.3%, Financial/RealEstate/ProfServices +10.8%, Electricity/Gas/Water/Utilities +10.8%
- Q3 FY24-25: Real GDP growth 6.2%, Nominal GDP growth 9.9%; Q2 FY24-25 Real GDP growth revised up to 5.6%
- 2024-25 sector growth: Construction 8.6%, Financial/RealEstate/ProfServices 7.2%, Trade/Hotels/Transport/Comm/Broadcasting 6.4%
- PFCE growth 2024-25 = 7.6% (vs 5.6% in 2023-24)
- Real GDP FY24-25 = ₹187.95 lakh cr (vs ₹176.51 lakh cr FY23-24 FRE) | Nominal GDP FY24-25 = ₹331.03 lakh cr (vs ₹301.23 lakh cr) — growth 6.5%/9.9%
- Real GVA FY24-25 = ₹171.80 lakh cr (vs ₹161.51 lakh cr), growth 6.4% (vs 8.6%) | Nominal GVA FY24-25 = ₹300.15 lakh cr (vs ₹274.13 lakh cr), growth 9.5%
- Q3 FY24-25 Real GDP = ₹47.17 lakh cr (vs ₹44.44 lakh cr), growth 6.2% | Nominal GDP = ₹84.74 lakh cr (vs ₹77.10 lakh cr), growth 9.9%
- Q3 FY24-25 Real GVA = ₹43.13 lakh cr (vs ₹40.60 lakh cr), growth 6.2% | Nominal GVA = ₹77.06 lakh cr (vs ₹69.90 lakh cr), growth 10.2%

- Q4 FY24-25 (Jan-Mar 2025) Real GDP growth = 7.4% (4-quarter high) → industrial growth (mfg/construction/mining) drove it; consumption demand slowed
- Full-year FY24-25 growth = 6.5% (4-year low), per NSO release 30 May 2025
- GDP grew 8.4% Q4 FY23-24, 9.2% full FY23-24; Q3 FY24-25 growth revised to 6.4% (from 6.2%)
- Industrial growth Q4 FY25 = 6.8% (from 5.1% Q3, vs 10.2% Q4 FY24) | Manufacturing Q4 FY25 = 4.8% (3-quarter high, vs 11.3% year-ago) | Construction Q4 FY25 = 10.8% (vs 8.7% year-ago)
- GVA growth Q4 FY25 = 6.8% (vs 6.5% Q3, vs 7.3% Q4 FY24); GDP=GVA+net product taxes(taxes–subsidies); net taxes grew 12.7% Q4 (vs 5% Q3, vs 18.7% year-ago). Full FY25 GVA growth = 6.4% (vs 8.6% FY24)
- Mining Q4 FY25 = 2.5% (vs 13% Q3, vs 0.8% Q4 FY24) | Agriculture Q4 FY25 = 5.4% (vs 6.6% Q3, vs 0.9% Q4 FY24) | Services Q4 FY25 = 7.3% (vs 7.4% Q3, vs 7.8% Q4 FY24)
- PFCE growth Q4 FY25 = 6.0% (5-quarter low, vs 8.1% Q3)
- MoSPI released 2 datasets 30 May 2025: Q4 FY25 growth estimate + provisional FY25 estimate
- 2 growth metrics: **GDP** (expenditure-side, sums individual/govt/business spending) vs **GVA** (supply-side, sums value-added per sector); **GDP = GVA + taxes earned by govt – subsidies provided by govt**
- Estimate revision cycle: Jan=First Advance Estimates(FAE) → end-Feb=Second Advance Estimates(SAE, +Q3 data) → end-May=Provisional Estimates(PE, +Q4 data) → +1yr=First Revised Estimates → +2yr=Final Estimates. For FY25: revisions due 2026 & 2027
- Nominal GDP FY25 = ₹330.7 trillion (lakh crore) per PE, +9.8% over FY24; in USD (+85.559 rate) = \$3.87 trillion
- FY25's 9.8% nominal growth = 3rd-slowest since 2014 (current govt), 6th-slowest since 1991 liberalisation; CAGR since 2014-15=10.3%; CAGR since 2019 (NDA 2nd term)=9.8%
- International growth comparisons use Real GDP (not nominal) since inflation differs by country
- Real GDP FY25 = ₹188 trillion, +6.5% (vs 9.2% FY24); CAGR of real GDP ≈5%+ since 2019, ≈6%+ since 2014
- 3 GVA sectors: Agriculture & allied (forestry etc.); Industry (mfg, construction etc.); Services (financial services, trade, hotels etc.)
- FY25 real GVA growth = 6.4% (vs 8.6% FY24); no sector's CAGR near 6% since 2019-20
- Since 2019-20: Manufacturing GVA CAGR = 4.04% — SLOWER than Agriculture & allied CAGR = 4.72% → explains high urban/youth unemployment + labour moving back to villages/agriculture

9 National Income Data Tables — Constant & Current Prices (2022-25)

DOUBT These tables (Lucent, NSO SAE 28 Feb 2025) are time-sensitive and read from a 120-dpi scan — spot-check individual cells against a primary source before relying on any single number. Discrepancy row's "% change" columns are printed as raw numbers even though the table's own note says shares should appear there instead — as printed, not corrected.

Constant (2011-12) Prices, ₹ crore — FE 2022-23 / FRE 2023-24 / SAE 2024-25 (%chg '24/'25)	
GVA at Basic Prices	1,48,78,028 / 1,61,51,477 / 1,71,79,842 (+8.6% / +6.4%)
Net Taxes on Products	12,86,885 / 14,99,114 / 16,15,253 (+16.5% / +7.7%)
GDP	1,61,64,913 / 1,76,50,591 / 1,87,95,095 (+9.2% / +6.5%)
NDP	1,40,76,950 / 1,54,21,624 / 1,64,24,210 (+9.6% / +6.5%)
PFCE	93,84,943 / 99,06,774 / 1,06,61,785 (+5.6% / +7.6%)
GFCE	15,43,991 / 16,69,675 / 17,32,611 (+8.1% / +3.8%)
GFCF	54,37,725 / 59,15,288 / 62,78,171 (+8.8% / +6.1%)
Changes in Stock (CIS)	1,99,177 / 3,05,610 / 3,18,839 (+53.4% / +4.3%)
Valuables	2,35,146 / 2,69,106 / 2,71,782 (+14.4% / +1.0%)
Exports	37,43,310 / 38,25,494 / 40,97,742 (+2.2% / +7.1%)
Imports	38,59,869 / 43,90,614 / 43,41,194 (+13.8% / -1.1%)
Discrepancies	-5,19,510 / 1,49,257 / -2,24,641
GNI	1,59,39,376 / 1,74,04,638 / 1,85,21,328 (+9.2% / +6.4%)
NNI	1,38,51,412 / 1,51,75,671 / 1,61,50,443 (+9.6% / +6.4%)

Population (mn)	1,383 / 1,395 / 1,408
Per Capita GDP (₹)	1,16,892 / 1,26,528 / 1,33,488 (+8.2% / +5.5%)
Per Capita GNI (₹)	1,15,261 / 1,24,764 / 1,31,544 (+8.2% / +5.4%)
Per Capita NNI (₹)	1,00,163 / 1,08,786 / 1,14,705 (+8.6% / +5.4%)
Per Capita PFCE (₹)	67,865 / 71,016 / 75,723 (+4.6% / +6.6%)

Share in GDP % (constant prices): PFCE 58.1/56.1/56.7 · GFCE 9.6/9.5/9.2 · GFCF 33.6/33.5/33.4 · CIS 1.2/1.7/1.7 · Valuables 1.5/1.5/1.4 · Exports 23.2/21.7/21.8 · Imports 23.9/24.9/23.1 · Discrepancies -3.2/0.8/-1.2.

Current Prices, ₹ crore — FE 2022-23 / FRE 2023-24 / SAE 2024-25 (%chg '24/'25)	
GVA at Basic Prices	2,46,46,698 / 2,74,12,888 / 3,00,14,893 (+11.2% / +9.5%)
Net Taxes on Products	22,43,775 / 27,10,068 / 30,88,322 (+20.8% / +14.0%)

Appendix

A.1 — PYQ citation index (bucket "02 National Income")

Fact tested	Exam · Date · Shift
PDI belongs to households; PDI=PI-Direct Tax	SSC CHSL Tier-I, 27/11/2025 (Sh-02)
Intermediate good = copper for utensils	SSC CHSL Tier-I, 25/11/2025 (Sh-02)
Replacement investment = depreciation	SSC CHSL Tier-I, 18/11/2025 (Sh-03)
Depreciation: GVA→Net Value Added	SSC CHSL Tier-I, 18/11/2025 (Sh-01)
Intermediate/Capital goods statement pair	SSC Phase XIII, 30/07/2025 (Sh-02)
2-sector: savings=leakage	SSC Stenographer, 07/08/2025 (Sh-02)
GNP interpretation (residents+non-residents)	SSC Stenographer, 08/08/2025 (Sh-02)
Services sector = highest GDP contributor	SSC Stenographer, 07/08/2025 (Sh-03)
GDP full form	SSC Phase XIII, 29/07/2025 (Sh-01)
Personal income/private-public income statement	SSC CHSL Tier-I, 22/11/2025 (Sh-02)

Sum of GVA of all firms = GDP	SSC CHSL Tier-I, 14/11/2025 (Sh-01)
1950-51 industry GDP share = 13%	SSC CHSL Tier-I, 13/11/2025 (Sh-01)
GNP-NNP difference = Depreciation	SSC CPO Tier-I, 12/12/2025 (Sh-02)
A-R: autonomous investment multiplier effect	SSC CGL Tier-I, 21/09/2025 (Sh-01)
A-R: GDP doesn't reflect wellbeing	SSC CGL Tier-I, 21/09/2025 (Sh-03)
GDP excludes intermediate goods value	SSC CGL Tier-I, 22/09/2025 (Sh-01)
Net Investment worked example (₹50L-₹5L=₹45L)	SSC Stenographer, 08/08/2025 (Sh-02)
Factor cost = only factor payments	SSC CHSL Tier-I, 26/11/2025 (Sh-02)

A.2 — Conflicts flagged (both sources' figures kept, not reconciled)

- GDP base year: Parmar says 2022-23; Lucent's tables use 2011-12 base series throughout
- Data-issuing body: Lucent §5 says CSO; Lucent §1 says NSO/MoSPI (same book, internally inconsistent)
- India's global GDP rank: Parmar says 5th nominal/3rd PPP (as of 2026); Lucent's Forbes India table (Batch 6) shows 4th nominal (28 Apr 2025)
